CC the 6213 antisense sequences given in the specification where expression CC (1) a vector comprising a promoters perably linked to the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoters operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense cc polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of a gene in an operon required for proliferation, or that inhibits cellular proliferation; (6) identifying a gene required for proliferation, or that inhibits cellular proliferation of a gene on which the test compound that influences the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism activity; (11) a culture compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent of or compound that inhibits the gene proliferation of an organism. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids are useful for for cellular proliferation in cells other than S. aureus, S. typhimurium, CC mental did not form part of the printed specification, but was obtained center that did not format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-MAR-2001;

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the genome of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and genes, proteins, vectors containing the genes and Ab are also useful therapeutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antibacterial; fungicide; insecticide; polymorphism; genetic analysis; detection; food; gene expression; plant; animal; microorganism; toxin; antibiotic; biopesticide; virulence factor; disease model; plague;

antisense nucleic acids, useful for identifying proteins or a homologous nucleic acids required for cellular proliferation late candidate molecules for rational drug discovery programs ç

SEQ ID NO 78174; 1766pp; English

invention relates to an isolated nucleic acid comprising any one of 6213 antisense sequences given in the specification where expression

```
cc of the nucleic acid inhibits proliferation of a cell. Also included are:
cc (1) a vector comprising a promoter operably linked to the nucleic acid
cc encoding a polypeptide whose expression is inhibited by the antisense
cc nucleic acid; (2) a host cell containing the vector; (3) an isolated
cc polypeptide or its fragment whose expression is inhibited by the
cc antisense nucleic acid; (4) an antibody capable of specifically binding
cc the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
cc proliferation or the activity of a gene in an operon required for
cc proliferation, (7) identifying a compound that influences the activity of
cc the gene product or that has an activity against a biological pathway
cc required for proliferation, or that inhibits cellular proliferation; (8)
cc raginsm acts; (9) manufacturing an antibiotic; (10) profiling a
cc or a gene on which the test compound that inhibits proliferation of an
cc organism acts; (9) manufacturing an antibiotic; (10) profiling a
cc product is overexpressed or underexpressed; (12) determining the extent
cc brich each of the strains is present in a culture or collection of
cc proliferation of an organism. The antisense nucleic acids are useful
cc for cellular proliferation to isolate candidate molecules for rational
cc drug discovery programs, or for screening homologous nucleic acids required
cc the target prokaryotic essential genes. Note: The sequence is encoded by one of
cc the target prokaryotic essential genes. Note: The sequence data for this
cc patent did not form part of the printed specification, but was obtained
cc in electronic format directly from WIPO at
cc fip.wipo.int/pub/published_pct_sequences

2003-029926/02.

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

25; SEQ ID NO 68391; 1766pp; English

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated convergence of the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation of a gene on which the test compound that inhibits proliferation of a genework of the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (1) identifying an antibiotic; (10) profiling a compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the extent to which each of the strains is present in a culture or collection of strains; or collection of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational cord drug discovery programs, or for screening homologous nucleic acids required or proliferation in cells other than S. arreeus, S. typhimurium, C. Experiment did not form part of the printed specification, but was obtained in electronic format directly from WIPO at invention relates to an isolated nucleic acid comprising any one of

Sequence 271 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Б
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid concloid a cell. Also included whose expression is inhibited by the antisense concloid acid; (2) a host cell containing the vector; (3) an isolated CC antisense nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of containing agene product or that has an activity against a biological pathway of centuring a gene required for cellular proliferation, or that inhibits cellular proliferation; (8) corpanism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent CC to which each of the strains is present in a culture or collection of conformatifying proteins or screening for homologous nucleic acids are useful for collection of an organism. The antisense nucleic acids required
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 21-MAR-2001; 2001US-00815242.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                68
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     <del>დ</del>
```

New polynucleotides for the identification and development of antibiotics, comprise sequences of antisense nucleic acids.

ID NO 11656; 511pp; English

cc prokaryotic cellular proliferation, their use in identifying the genes, cc their use in the discovery of novel antibiotics, the essential genes coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, cc yseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic cd development. The antisense nucleic acids can also be used to identify cc proteins used in proliferation, to express these proteins, and to obtain cc antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acids seful to screen for homologous cucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent compound in format directly from WIPO at the wipo.int/pub/published oct recreaments but was obtained in

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 47704; 1766pp; English.

CC (1) a vector comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated CC encoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for proliferation, or that inhibits cellular proliferation or proliferation, or that inhibits cellular proliferation or proliferation, or that inhibits cellular proliferation of the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent CC which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the that inhibits the compound that inhibits or collection of containing, or (13) identifying the target of a compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the compound that inhibits the containing of an antisense nucleic acids are useful for clentifying proteins or screening for homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, Cramber of the printed specification, but was obtained contained that of this bed not cellular proliferation of the printed specification, but was obtained cellular proliferation decembers. the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid ftp.wipo.int/pub/published_pct_sequences invention relates to an isolated nucleic acid comprising any one of

                                                                           the 513 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid cell encoding a polypoptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated composition or its fragment whose expression is inhibited by the antisense cell polypoptide or its fragment whose expression is inhibited by the antisense cell polypoptide; (5) producing the polypoptide; (6) inhibiting cellular cell product or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway or which a proliferation, or that inhibite cellular product lies or a gene on which the test compound that inhibite gene product lies compound by activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent cempound that inhibite proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound of the strains; or (13) identifying the target of a compound that inhibite spoliferation of strains; or (13) identifying the target of a compound that inhibite proliferation of cells of a culture or collection of strains; or (13) identifying the target of a compound that inhibite strains in which the gene product is extent of the strains is present in a culture or collection of the strains; or screening for homologous nucleic acids required for proliferation to isolate candidate molecules for rational cell drug discovery programs, or for screening homologous nucleic acids required for prokaryotic essential genes. Note: The sequence data for this gatent did not format directly from WIPO at the sequence data for this cell in electronic format directly from WIPO at

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the
                                                                                                                                                                                                                                                           Wang

ms-ru-oro-o/4-2.rag

cc antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular cc proliferation or the activity of a gene in an operon required for cc proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway contentifying a gene required for proliferation, or that inhibits cellular proliferation; (8) cc identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene cromoduct is exercised or underexpressed; (12) determining the extent compound's activity; (11) a culture comprising strains in which the gene cromoduct is exercised for underexpressed; (12) determining the extent compound's activity; (11) a culture comprising strains in which the gene cromoduct is exercised for underexpressed; (12) determining the extent compound that inhibits the compound that inhibits the condition of an organism. The antisense nucleic acids are useful for condiferation of an organism. The antisense nucleic acids are useful for conditional conditions or screening for homologous nucleic acids required conditions or screening for homologous nucleic acids required conditions or screening to the candidate molecules for rational conditions of the target of a compound that inhibits the condition of an electronic format directly from WIPO at the target of accoded by one of the target of the condition part of the printed specification, but was obtained condition in the part of the printed specification, but was obtained conditions in the part of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 61127; 1766pp; English.

CC polypeptide or its fragment whose expression is inhibited by the carriery (2) arrotation of the polypeptide; (6) producing the polypeptide; (6) inhibited by the control or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of contentifying a gene required for proliferation, or that inhibits cellular proliferation or proliferation, or that inhibits proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an occompound's activity; (11) a culture comprising strains in which the gene or gene on which the strains is present in a culture or collection of compound's activity; (11) a culture comprising strains in which the gene product is overexpressed of (12) decermining the extent to which each of the strains is present in a culture or collection of compound that onlibits the trains; or (13) identifying the target of a compound that inhibits the comp The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of eall. Also included are (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated ftp.wipo.int/pub/published_pct_sequences are:

The invention relates to an isolated nucleic acid comprising any one of comprising antisense sequences given in the specification where expression of the following a polypeptide acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concelled acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense concelled acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the sexpression is inhibited by the contiferation, or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound which that the test compound that inhibits gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the gene collection of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational cold drug discovery programs, or for screening homologous nucleic acids required of the tracet of proliferation in cells other than S. aureus, S. typhimurium, the tracet of the control of the second of the control of the second of the control of the control of the control of the second of the control of the control of the control of the control of the control of the control of the control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-MAR-2001; 2001US-00815242.

```

The invention relates to an isolated nucleic acid comprising any one

O.F

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25;

SEQ ID NO 49339; 1766pp; English

cc of the nucleic acid inhibits proliferation of a cell. Also included are:
cc (1) a vector comprising a promoter operably linked to the nucleic acid
cc encoding a polypeptide whose expression is inhibited by the antisense
cc nucleic acid; (2) a host cell containing the vector; (3) an isolated
cc antisense nucleic acid; (4) an antibody capable of specifically binding
cc the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
cc proliferation or the activity of a gene in an operon required for
cc proliferation; (7) identifying a compound that influences the activity of
cc required for proliferation, or that inhibits cellular proliferation; (8)
cc required for proliferation, or that inhibits cellular proliferation of an
cc organism acts; (9) manufacturing an antibiotic; (10) profiling a
cc organism acts; (9) manufacturing an antibiotic; (10) profiling a
cc organism acts; (9) manufacturing an antibiotic; (10) profiling a
cc product is overexpressed or underexpressed; (12) determining the exent
cc product is overexpressed or underexpressed; (12) determining the exent
cc product is overexpressed or underexpressed; (12) determining the exent
cc proliferation of an organism. The antisense nucleic acids are useful for
cc identifying proteins or screening for homologous nucleic acids required
cc for cellular proliferation to isolate candidate molecules for rational
cc required for proliferation in cells other than S. aureus, S. typhimurium,
cc the target prokaryotic essential genes. Note: The sequence data for this
cc patent did not form part of the printed specification, but was obtained
cc in electronic format directly from WIPO at
cc fip.wipo.int/pub/published_pct_sequences

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 51201; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression (c) of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense concleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that that an activity against a biological pathway in which a proliferation or that inhibits cellular proliferation or proliferation or that inhibits proliferation or the biological pathway in which a proliferation required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids the extent compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits and the extent of compound that inhibits are useful for compound discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, compound that inhibits promises of the target process of the tearget of the printed specification, but was obtained concluded by one of the target process. The present sequence data for this path of the printed specification, but was obtained concluded by one of the target of the ftp.wipo.int/pub/published_pct_sequences

The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese. Note: The sequence data for this patent is based on equivalent patent w0200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleotide sequence useful in lactis and related species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Biosynthesis;
                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-043418/06
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11-APR-2000; 2000FR-00004630
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-AUG-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                188
```

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 67692; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression CC of the mucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a pronoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated CC encoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the activity of a gene in an operon required for CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC the gene product or that has an activity against a biological pathway of identifying a gene required for cellular proliferation or the biological pathway in which a proliferation or the compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits proliferation of an compound that inhibits the strains is present in a culture or collection of compound the content of a compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent compound that inhibits the extent is present in a culture or collection of the target of a compound that inhibits . The antisense nucleic acids are useful the for

The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes, CC their use in the discovery of novel antibiotics, the essential genes CC themselves and the encoded proteins. The prokaryotes used are Escherichia CC oli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, CC pseudomonas aeruginosa and Enterococcus faecalis. The invention is also cuseful for the identification of potential new targets for antibiotic CC development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain CC antibodies capable of binding to the expressed proteins. The proteins can CC be used to screen compounds in rational drug discovery programmes. The CC antisense nucleic acid sequence is also useful to screen for homologous CC used to acids which are required for cell proliferation in a wide variety CC of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent CC electronic format directly from WIPO at CC ffen, who in the Armitichea are constanted specification, but was obtained in CC electronic format directly from WIPO at

proliferation;

drug design.

į

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression confirmation acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense concleic acid; (2) a host cell containing the vector; (3) an isolated continued acid; (2) a host cell containing the vector; (3) an isolated continued acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular continued for proliferation, (7) identifying a gene in an operon required for the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation or crequired for crequired for proliferation, or that inhibits cellular proliferation or crequired gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture compound that inhibits proliferation of an organism. The antisense mucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the test compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits are useful for compound that inhibits are useful for compound that proliferation of compound that inhibits the configuration of an organism. The antisense mucleic acids are useful for compound discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, compound that did not form part of the printed specification, but was obtained in electronic format directly from WIFO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                     The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes, CC their use in the discovery of novel antiblotics, the essential genes are themselves and the encoded proteins. The prokaryotes used are Escherichia CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, CC pseudomonas aeruginosa and Enterococcus faccalis. The invention is also CC useful for the identification of potential new targets for antibiotic CC development. The antisense nucleic acids can also be used to identify CC proteins used in proliferation, to express these proteins, and to obtain CC antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous CC uncleic acids which are required for cell proliferation in a wide variety CC of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent CC did not form part of the printed specification, but was obtained in CC electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antisense; prokaryotic cellular proliferation protein; antibiotic; antibacterial; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAU33650;

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid, (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-JUN-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cc identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies cor a gene on which the test compound that inhibits proliferation of an cc compound sacts; (9) manufacturing an antibiotic; (10) profiling a compound sacts; (9) manufacturing an antibiotic; (10) profiling a compound sacts; (11) a culture comprising strains in which the gene compound is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the taxget of a compound that inhibits the conjulation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational charget discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, c. k. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained conjultation in collate candidate and the printed specification of the proportion of the proportion of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 110;

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

the 513 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense conversed; (2) a host cell containing the vector; (3) an isolated collected acid; (2) a host cell containing the vector; (3) an isolated collected polypeptide or its fragment whose expression is inhibited by the antisense composition or the activity of a gene expression is inhibited by the composition or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of identifying a gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an argene on which the test compound that inhibits gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is extrains; or (13) identifying the target of a compound that inhibits the extent of which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the extent of compound's activity profiling a compound that inhibits the extent of confideration of an organism. The antisense nucleic acids required for required for proliferation to isolate candidate molecules for rational crud discovery programs, or for screening homologous nucleic acids required confideration of the printed specification, but was obtained of entertronic format directly from WiPo at ftp.wipo.int/pub/published_pct_sequences invention relates to an isolated nucleic acid comprising any any one of expression

New isolate antisense nucleic acids, useful for identifying proteins or screening homologous nucleic acids required for cellular proliferation to late candidate molecules for rational drug discovery programs.

SEQ ID NO 67627; 1766pp; English

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector comprising a promoter operably linked to the nucleic acid cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular cellular proliferation or the activity of a gene in an operon required for proliferation, or that that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits proliferation of compound that inhibits the extent to which each of the strains is present in a culture or collection of compound that inhibits the extent to which each of the strains for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational conditions. The antisense nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, compound that cellular proliferation cellular proliferation cellular proliferation to compound that inhibits the cellular proliferation cel

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      03-OCT-2002
                                                                                                                                                                                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

                                                                                                                                                     B faecalis EF009 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a protein isolated from Enterococcus faecalis. The present invention describes genes, proteins and antigenic polypeptides isolated from E. faecalis. The proteins can be used in vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal. They can also be used for detecting Enterococcus antibodies in a sample. The nucleotide sequences can be used for detecting Enterococcus nucleic acids. Products from the present invention can also be used for screening compounds to identify agonists and antagonists of E. faecalis protein activity

The proteins can be used as vaccines for preventing or attenuating an infection caused by a member of the Enterococcus genus in an animal, particularly E. faecalis. The polynucleotide is also useful for preventing or treating E. faecalis infection. The present sequence is a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New genes and polypeptides from Enterococcus faecalis, useful as vaccines for preventing, treating or attenuating an infection caused by a member of the Enterococcus genus in an animal, particularly E. faecalis.

WPI; 2003-416890/39

New nucleic acid molecules and polypeptides from Enterococcus faecalis, useful as vaccines for preventing or attenuating an enterococcal infection in an animal, or for identifying Enterococcus faecalis in biological samples.

Claim 12; Page; 40pp; English.

CC ACAST949-ACABS196 (or sequences complementary to them or 95% identical to chem, Also included are the proteins encoded by the above nucleic acids, cc making a recombinant vector (comprising inserting the isolated nucleic acids, cc making a recombinant vector (comprising inserting the isolated nucleic acids, cc making a recombinant vector (comprising inserting the isolated nucleic acids, cc making a recombinant vector (comprising inserting the isolated nucleic acid molecule cited above into a vector), a host cell comprising the vector (used to produce the protein), an isolated antibody specific for cc the polypeptides, a hybridoma that produces the antibody, an isolated cc polypeptide antigen comprising an amino acid sequence of an Enterococcus faecalis epitope listed in the specification, a vaccine comprising one or cc excipient) where the polypeptides (and a pharmaceutical diluent, carrier or cc more E. faecalis polypeptides (and a pharmaceutical diluent, carrier or cc excipient) where the polypeptide elicits protective antibodies in an infection caused by a member of the genus Enterococcus; preventing or attenuating cc antification caused by a member of the genus Enterococcus in an animal cc comprising administering to the animal the polypeptide and detecting cc nucleic acid molecules and polypeptides are useful as vaccines for cc preventing or attenuating an enterococcus infection (UTI), intrabdominal cite infection, soft tissue infection and neonatal sepsis). The polypeptides care also useful as probes for gene mapping, or for identifying c that specifically bind E. faecalis polypeptides. The nucleic acid conjugates are also useful as probes for gene mapping, or for identifying c faecalis in biological samples. The sequence is a novel E. faecalis patient of the printed specification, but was obtained in complete comprising the printed specification, but was obtained in celectorial comprising the printed specification.

Anti cc polypeptide or its fragment whose expression is inhibited by the contisense mucleic acid; (4) an antibody capable of specifically binding cf the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular cf proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of cellular proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a ccompound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the gene consideration of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational conference of a caruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained conference in electronic format directly from WIPO at the care of the printed specification, but was obtained conference of the care The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated expression are:

Enterococcus faecalis, EF040, and the polypeptides encoded by them. The polypeptides are useful in detecting E. faecalis, as epitope tags, as molecular weight markers on SDS-PAGE gels or for molecular sieve gel filtration columns, in generating antibodies that specifically bind to the E. faecalis polypeptides, in generating an immune response against E. faecalis polypeptides, in generating an immune response against E.
                                                                                                                                New EF040 polypeptides and polynucleotides from Enterococcus faecalis, useful for generating an immune response against E. faecalis and other Enterococcus species, and as vaccines against other bacterial genera.
                                                              The invention relates to polynucleotide fragments of a gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bacterial genera. The polynucleotides are useful as probes for gene mapping and for identifying E. faecalis in biological samples. Sequences ABU13508-ABU13755 represent EF040 polypeptides of the invention. Note: The sequence data for this patent can also be obtained from USPTO at segdata.uspto.gov/sequence.html
